WeHealth

# Foreword

**WeHealth is based on a personal belief: the digital revolution should not bypass the healthcare world and patients should be at the heart of solutions developed for their care.**

This initial idea has led me to scour the world looking for innovative and disruptive start-ups. "Our hope is that one day we will provide patients with access to quicker and more effective care as well as improve the day-to-day activities of healthcare professionals. We believe that in the future medicine will become more targeted and will prevent health complications while reducing healthcare costs. I am very proud of what we have already accomplished and even more of the dedication, perseverance and expertise of the young, dynamic and multidisciplinary WeHealth team. WeHealth has completely transformed my understanding of issues facing the healthcare sector and I look forward to developing more innovative solutions that lead the way in transforming care pathways".

# Highlighting the future of healthcare

**At WeHealth, we are committed to spotting therapeutic solutions that offer current and future generations a world where high quality care is accessible to all.**

To achieve this goal, we constantly travel the world to detect and foster start-ups and entrepreneurs. We seek innovative medical services and devices that improve care for patients and everyday life for healthcare professionals while reducing costs.

*Partnerships all around the world*

**We have established close links with incubators, universities and accelerators all around the world:**

- Center for Digital Health Innovation (CDHI) at University of California, San Francisco (UCSF)
- Peter Sheehan Diabetes Care Foundation (PSDC Foundation), New York
- BPI France
- Plug and Play
- MassChallenge
- Technion
- WILCO
- WAI Boost
- MIT Agelab
- Baylor College of Medicine
- The University of Mississippi Medical center

# Our top priority: the patient

**At WeHealth, we believe that we can improve the patients' journey and change the approach of medicine by a convergence of people, information, technology, and connectivity.**

Through e-health solutions like treatment reminders, online sharing of medical records, Internet of Things, and so much more, we are convinced that more simplified and personalized treatments approaches can foster and optimize the number of medical exams and hospitalizations.

# A unique and equal partnership

At WeHealth, we have a unique outlook on partnerships with start-ups and entrepreneurs. We are not looking for acquisitions, we are looking for co-creation and sharing of our expertise.

**That's why we develop long-term product partnerships with the start-ups we collaborate with.**

We believe that successful collaborations happen when everyone stays independent and each entity retains its DNA. Each year, we meet with more than 500 start-ups, evaluate 50 and aim to partner with at least 10 of them.

# Our objectives and missions

**We want to improve** patients' and HCPs' daily lives by using digital technologies.

**We propose** connected digital solutions as well as services based on data value creation to better prevent and predict disease evolution.

**We use** international open innovation to identify the best solutions and services.

**We want to accelerate** the development, industrialization and distribution of these innovations in order to make them accessible to the majority.
